IV. Health Information

I, the undersigned, certify that the animals described above meet the following requirements

- (a) a declaration has been received from the owner of the said animals stating that they have been kept in Great Britain since birth. They have been drawn from flocks in which they have remained continuously since birth or from flocks in which they have remained continuously since their removal from the flock in which they were born;
- (b) the said animals have been isolated under my supervision during the 30 days immediately preceding shipment;
- (c) on ~~17th~~ <sup>7th</sup> September 1983 I examined the said animals and found them to be free from clinical signs or symptoms of infectious or contagious disease;
- (d) on ~~6th~~ <sup>6th</sup> September 1983 blood samples were taken from the said animals and sent to the Central Veterinary Laboratory, Weybridge/Laswade where they were submitted to the following tests with negative results in each case:-
  - (i) complement fixation test for Brucella ovis;
  - (ii) complement fixation test for Brucella abortus;
  - (iii) microscopic agglutination test using live antigen for leptospirosis (serotypes: L. australis, grippityphosa and pomona) (less than 50% agglutination at a dilution of 1:100);
- (e) on ~~6th~~ <sup>6th</sup> September 1983 the said animals were treated for the removal of internal parasites, including trematodes, nematodes and cestodes, by the use of the following preparation NILZAN (ICL).....;
- (f) on ~~6th~~ <sup>6th</sup> September 1983 the said animals were treated for the removal of coccidia, by the use of the following preparation SULPHAMEZATHINE ... (ICL).;
- (g) on ~~17th~~ <sup>17th</sup> September 1983 the said animals were dipped against ectoparasites including sheep scab using the following preparation .. ALUGAN. (HOECHST)..... (at the manufacturers recommended dose rate);
- (h) within three months immediately preceding exportation, on ~~15th~~ <sup>15th</sup> August 1983 and on ~~17th~~ <sup>17th</sup> September 1983 the said animals were subjected to basic immunisation of 2 injections at least 4 weeks apart against the following:-

Dear Sir

FARM ANIMALS TO THE FACKLANDS

I confirm that the ONE Jacob  
Shearling Ewe, EAR NO 782 J4, has  
been kept in Great Britain since  
birth and has been drawn from a  
flock in which it has remained  
continuously since birth.

Yours faithfully,

G. V. Crowden

IV. Health Information

I, the undersigned, certify that the animals described above meet the following requirements

- (a) a declaration has been received from the owner of the said animals stating that they have been kept in Great Britain since birth. They have been drawn from flocks in which they have remained continuously since birth or from flocks in which they have remained continuously since their removal from the flock in which they were born;
- (b) the said animals have been isolated under my supervision during the 30 days immediately preceding shipment;
- (c) on 17.9.83..... I examined the said animals and found them to be free from clinical signs or symptoms of infectious or contagious disease;
- (d) on 6.9.83..... blood samples were taken from the said animals and sent to the Central Veterinary Laboratory, Weybridge/~~Leaswade~~ where they were submitted to the following tests with negative results in each case:-
 - (i) complement fixation test for Brucella ovis;
 - (ii) complement fixation test for Brucella abortus;
 - (iii) microscopic agglutination test using live antigen for leptospirosis (serotypes: L. australis, grippityphosa and pomona) (less than 50% agglutination at a dilution of 1:100);
- (e) on 6.9.83..... the said animals were treated for the removal of internal parasites, including trematodes, nematodes and cestodes, by the use of the following preparation NU4707.....;
- (f) on 6.9.83..... the said animals were treated for the removal of coccidia, by the use of the following preparation Medvet.....;
- (g) on 7.9.83..... the said animals were dipped against ectoparasites including sheep scab using the following preparation COOPER'S FLY DIP (BHC)..... CHLORFEN VIN PHOS (at the manufacturers recommended dose rate); GALLIUM BENZENE HEXACHLORIDE
- (h) within three months immediately preceding exportation, on 15.8.83.... and on 17.9.83....., the said animals were subjected to basic immunisation of 2 injections at least 4 weeks apart against the following:-

- 1. Clostridium Welchii types B, C and D
- 2. Clostridium Septicum
- 3. Clostridium Chaveoi
- 4. Clostridium oedematiens types B and D
- 5. Clostridium tetani

- (i) within three months immediately preceding exportation, on15.8.83... and on ..17.9.83..... the said animals were subjected to basic immunisation of 2 injections at least 4 weeks apart against the following:-
 - 1. Pasteurella haemolytica
 - 2. Pasteurella multocida
- (j) in so far as can be determined there has been no clinical evidence of listeriosis, vibriosis, leptospirosis, hydatidosis, toxoplasmosis, contagious pustular dermatitis, Corynebacterium ovis infection, and salmonellosis on the premises of origin during the past 3 months;
- (k) in so far as can be determined there has never been any clinical evidence of Johne's disease, scrapie or maedi visna on the premises of origin;
- (l) in so far as can be determined there has been no evidence of enzootic abortion on the premises of origin during the past 2 years;
- (m) in so far as can be determined there has been no clinical signs of foot rot in the sheep to be exported during the 30 days immediately preceding export;
- (n) no outbreak of anthrax has occurred at the premises of origin during the past 3 months;
- (o) no outbreak of sheep scab has occurred at the premises of origin during the past 2 years;
- (p) no outbreak of foot and mouth disease, rabies, rinderpest and sheep pox has occurred in Great Britain during the past 2 years;
- (q) Brucella ovis ~~does not exist in Great Britain;~~ ^{DOES} not exist in Great Britain;
- (r) a declaration has been received from the exporter stating that the said animals will be transported direct from the premises of origin to the port of shipment in vehicles cleansed and disinfected with an approved disinfectant and without contact with other animals apart from those similarly certified.

5) No clinical signs of contagious agalactia have occurred on the premises of origin during the past twelve months.

I. Number and identification of the animals

| Official ear mark | Breed  | Sex | Age   |
|-------------------|--------|-----|-------|
| Red tag 32        | Romney | M   | 1 1/2 |

II. Origin of the animals

(a) Name and address of exporter *Export, Crab Hill Farm,*  
*Nutfield, Redhill*

(b) Address of premises of origin  
where the animals were examined *Ashley House, New Romney..*

*In isolation - Lydd* *Romney Marsh, Kent*

III. Destination of the animals

(a) Country of destination *Falkland Islands*

(b) Name and address of consignee *S. Whitley MRCVS*  
*Port Stanley Falkland Islands*

(c) Means of transportation *Sea*

EC 1060

IV. Health Information

I, the undersigned, certify that the animals described above meet the following requirements

- (a) a declaration has been received from the owner of the said animals stating that they have been kept in Great Britain since birth. They have been drawn from flocks in which they have remained continuously since birth or from flocks in which they have remained continuously since their removal from the flock in which they were born;
- (b) the said animals have been isolated under my supervision during the 30 days immediately preceding shipment;
- (c) on .....<sup>18.9.83</sup>..... I examined the said animals and found them to be free from clinical signs or symptoms of infectious or contagious disease;
- (d) on .....<sup>6.9.83</sup>..... blood samples were taken from the said animals and sent to the Central Veterinary Laboratory, Weybridge/~~Leocwade~~ where they were submitted to the following tests with negative results in each case:-
  - (i) complement fixation test for Brucella ovis;
  - (ii) complement fixation test for Brucella abortus;
  - (iii) microscopic agglutination test using live antigen for leptospirosis (serotypes: L. australis, grippotyphosa and pomona) (less than 50% agglutination at a dilution of 1:100);
- (e) on .....<sup>14.9.83</sup>..... the said animals were treated for the removal of internal parasites, including trematodes, nematodes and cestodes, by the use of the following preparation .....<sup>VALBAREN</sup>.....;
- (f) on .....<sup>14.15.16/9/83</sup>..... the said animals were treated for the removal of coccidia, by the use of the following preparation .....<sup>SUNPHANTERAZOLINE</sup>.....;
- (g) on ...<sup>15.9.83</sup>..... the said animals were dipped against ectoparasites including sheep scab using the following preparation .....<sup>BATTLES DIF</sup>..... (at the manufacturers recommended dose rate);
- (h) within three months immediately preceding exportation, on .....<sup>17.8.83</sup>..... and on .....<sup>18.9.83</sup>....., the said animals were subjected to basic immunisation of 2 injections at least 4 weeks apart against the following:-

(c) Means of transportation .....Sea.....

IV. Health Information

I, the undersigned, certify that the animals described above meet the following requirements

- (a) a declaration has been received from the owner of the said animals stating that they have been kept in Great Britain since birth. They have been drawn from flocks in which they have remained continuously since birth or from flocks in which they have remained continuously since their removal from the flock in which they were born;
- (b) the said animals have been isolated under my supervision during the 30 days immediately preceding shipment;
- (c) on ~~18<sup>th</sup> SEPTEMBER 1983~~ <sup>18<sup>th</sup> SEPTEMBER 1983</sup>. I examined the said animals and found them to be free from clinical signs or symptoms of infectious or contagious disease;
- (d) on ~~6<sup>th</sup> SEPTEMBER 1983~~ <sup>6<sup>th</sup> SEPTEMBER 1983</sup> blood samples were taken from the said animals and sent to the Central Veterinary Laboratory, Weybridge/Lasswade where they were submitted to the following tests with negative results in each case:-
  - (i) complement fixation test for Brucella ovis;
  - (ii) complement fixation test for Brucella abortus;
  - (iii) microscopic agglutination test using live antigen for leptospirosis (serotypes: L. australis, grippotyphosa and pomona) (less than 50% agglutination at a dilution of 1:100);
- (e) on ~~18<sup>th</sup> SEPTEMBER 1983~~ <sup>18<sup>th</sup> SEPTEMBER 1983</sup> the said animals were treated for the removal of internal parasites, including trematodes, nematodes and cestodes, by the use of the following preparation ... ~~NILZAN~~ <sup>NILZAN</sup> .....
- (f) on ~~15<sup>th</sup>, 16<sup>th</sup> & 17<sup>th</sup> SEPT. 1983~~ <sup>15<sup>th</sup>, 16<sup>th</sup> & 17<sup>th</sup> SEPT. 1983</sup> the said animals were treated for the removal of coccidia, by the use of the following preparation ~~SULPHAMEZATHINE~~ <sup>SULPHAMEZATHINE</sup> .....
- (g) on ~~13<sup>th</sup> SEPTEMBER 1983~~ <sup>13<sup>th</sup> SEPTEMBER 1983</sup> the said animals were dipped against ectoparasites including sheep scab using the following preparation ... ~~COOPERS FLY D.I.P. (SCAB APPROVED)~~ <sup>COOPERS FLY D.I.P. (SCAB APPROVED)</sup> .....
- (h) within three months immediately preceding exportation, on ~~15<sup>th</sup> AUGUST 1983~~ <sup>15<sup>th</sup> AUGUST 1983</sup> and on ~~18<sup>th</sup> SEPTEMBER 1983~~ <sup>18<sup>th</sup> SEPTEMBER 1983</sup>, the said animals were subjected to basic immunisation of 2 injections at least 4 weeks apart against the following:-

TO WHOM IT MAY CONCERN.

DECLARATION.

This is to declare that we the undersigned  
(Horne & Son) are the owners and breeders of the five  
(5) Rams being consigned by us to the Falklands, they  
have been bred by us and have never left our premises.

Horne & Son.

VAT No. 201 8761 84

Romney Sheep to The Falklands

Dear Sir

I Geoffrey Brenton Richards of G B Richards & Son declare that the 13 ewe tegs and 4 rams that are going to be from Lacton Manor Farm to the Falkland Islands have been kept by G B Richards & Son since birth. The 13 ewe tegs and two of the rams have been taken from our own flock where they have been since birth. The two other rams have been in our flock since purchased from the Romney Group Breeders as lambs from Wye College.

Yours sincerely

G B Richards.

17th September 1983.

Romney Sheep to The Falklands

Dear Sir

I Geoffrey Brenton Richards of G B Richards & Son declare that the 13 ewe tegs and 4 rams that are going from Lacton Manor Farm to the Falkland Islands Have been kept by G B Richards & Son since birth. The 13 ewe tegs and two of the rams have been taken from our own flock where they have been since birth. The two other rams have been in our flock since purchased from the Romney Group Breeders as lambs from Wye College.

Yours sincerely

G B Richards.

IV. Health Information

I, the undersigned, certify that the animals described above meet the following requirements

- (a) a declaration has been received from the owner of the said animals stating that they have been kept in Great Britain since birth. They have been drawn from flocks in which they have remained continuously since birth or from flocks in which they have remained continuously since their removal from the flock in which they were born;
- (b) the said animals have been isolated under my supervision during the 30 days immediately preceding shipment;
- (c) on 18/9/83..... I examined the said animals and found them to be free from clinical signs or symptoms of infectious or contagious disease;
- (d) on 6/9/83..... blood samples were taken from the said animals and sent to the Central Veterinary Laboratory, Weybridge/Lasswade where they were submitted to the following tests with negative results in each case:-
 - (i) complement fixation test for Brucella ovis;
 - (ii) complement fixation test for Brucella abortus;
 - (iii) microscopic agglutination test using live antigen for leptospirosis (serotypes: L. australis, grippotyphosa and pomona) (less than 50% agglutination at a dilution of 1:100);
- (e) on 18/9/83..... the said animals were treated for the removal of internal parasites, including trematodes, nematodes and cestodes, by the use of the following preparation MILZAN FLUKE WORM MENCH
- (f) on 18/9/83..... the said animals were treated for the removal of coccidia, by the use of the following preparation MIDICEL.....;
- (g) on 18/9/83..... the said animals were dipped against ectoparasites including sheep scab using the following preparation FAALERS SHEEP Dip (Fenst + Sheep Scab Dip) (at the manufacturers recommended dose rate);
- (h) within three months immediately preceding exportation, on 15/8/83..... and on 18/9/83....., the said animals were subjected to basic immunisation of 2 injections at least 4 weeks apart against the following:-

1. Clostridium Welchii types B, C and D
2. Clostridium Septicum
3. Clostridium Chaveoi
4. Clostridium oedematiens types B and D
5. Clostridium tetani

(i) within three months immediately preceding exportation, on ...^{15/8/83}..... and on ^{18/9/83}..... the said animals were subjected to basic immunisation of 2 injections at least 4 weeks apart against the following:-

1. Pasteurella haemolytica
2. Pasteurella multocida

(j) in so far as can be determined there has been no clinical evidence of listeriosis, vibriosis, leptospirosis, hydatidosis, toxoplasmosis, contagious pustular dermatitis, Corynebacterium ovis infection, and salmonellosis on the premises of origin during the past 3 months;

(k) in so far as can be determined there has never been any clinical evidence of Johne's disease, scrapie or maedi visna on the premises of origin;

(l) in so far as can be determined there has been no evidence of enzootic abortion on the premises of origin during the past 2 years;

(m) in so far as can be determined there has been no clinical signs of foot rot in the sheep to be exported during the 30 days immediately preceding export;

(n) no outbreak of anthrax has occurred at the premises of origin during the past 3 months;

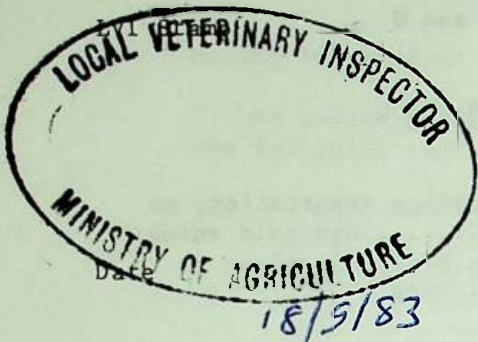

(o) no outbreak of sheep scab has occurred at the premises of origin during the past 2 years;

(p) no outbreak of foot and mouth disease, rabies, rinderpest and sheep pox has occurred in Great Britain during the past 2 years;

(q) Brucella ovis ~~and contagious agalactia~~ ^{does} do not exist in Great Britain;
Nicholas J. Muir

(r) a declaration has been received from the exporter stating that the said animals will be transported direct from the premises of origin to the port of shipment in vehicles cleansed and disinfected with an approved disinfectant and without contact with other animals apart from those similarly certified.

ADNAAE (s) No clinical signs of contagious agalactia have occurred on the premises of origin during the past 12 months

IV. Health Information

I, the undersigned, certify that the animals described above meet the following requirements

(a) a declaration has been received from the owner of the said animals stating that they have been kept in Great Britain since birth. They have been drawn from flocks in which they have remained continuously since birth or from flocks in which they have remained continuously since their removal from the flock in which they were born;

(b) the said animals have been isolated under my supervision during the 30 days immediately preceding shipment;

(c) on 17<sup>TH</sup> SEPT. 1983 I examined the said animals and found them to be free from clinical signs or symptoms of infectious or contagious disease;

(d) on 6<sup>TH</sup> SEPT. 1983 blood samples were taken from the said animals and sent to the Central Veterinary Laboratory, Weybridge/Lasswade where they were submitted to the following tests with negative results in each case:-

- (i) complement fixation test for Brucella ovis;
- (ii) complement fixation test for Brucella abortus;
- (iii) microscopic agglutination test using live antigen for leptospirosis (serotypes: L. australis, grippotyphosa and pomona) (less than 50% agglutination at a dilution of 1:100);

(e) on 6<sup>TH</sup> SEPT. 1983 the said animals were treated for the removal of internal parasites, including trematodes, nematodes and cestodes, by the use of the following preparation 1:50% L.EV. 10% 150 L.E. 1% M.D.P. 0.1% THORIDR } I.C. 1.0%  
3.0% OXYCLOZANIDE } 5 NILZAN

(f) on 6<sup>TH</sup> SEPT. 1983, the said animals were treated for the removal of coccidia, by the use of the following preparation .33% 3.0% SVL P.D.A.M.S. THAZIN

(g) on 7<sup>TH</sup> SEPT. 1983 the said animals were dipped against ectoparasites including sheep scab using the following preparation 1:1.0% 1.0% S.V.A.B. .... APP. ROX. 6.0% .... (at the manufacturers recommended dose rate);

(h) within three months immediately preceding exportation, on 15<sup>TH</sup> AUG. 1983 and on ....., the said animals were subjected to basic immunisation of 2 injections at least 4 weeks apart against the following:-

*J. H. ...*  
The Ram is already in a routine vaccination programme against Clostridia and Pasteurella and therefore has on this occasion received recommended booster injections.
