MINUTES.

Telegram from Chief Inspector of Stock, d/30/1/22... *Encl 1*

*Submitted  
for C.S.  
31st Jan 1922.*

*Always full reports from Inspector of Stock  
on his return to Starley.*

*for  
1 February 1922*

*Extract from letter by Chief Inspector of Stock  
dated 22nd September 1922 - Encl 2*

*Submitted for information*

*26/1/22*

*Hon Sec Secretary*

*As stated in my letter of Sept 22nd two flocks  
were found to be slightly & one flock of 400 east river  
badly infected, later one more flock was found with*

Subsequent Paper.

Well, all these flocks with the exception of the one that was  
destroyed, were dipped twice with an interval of 14 days  
and Mr Evans intends dipping again twice off the shears  
which will I think effectually stamp out this trouble.  
I failed to find any of the flocks on the adjoining stations  
affected.

B. A. Brown

Chief Inspector of Stock  
6/11/22

Attach to inf. re & mission of C.I.S. to  
West to enquire into abortion in ewes.

B. A. 20/12/22 when the report of C.I.S. on  
abortion in the sheep ~~with~~ should be ready

Dispatched : 20th January.....19 22. Time. 8.15 p.m.

Received : 31st January.....19 22. Time. 10.30a.m.

Please inform His Excellency sheep lice reported and verified at Waldrons Port Howard taking all precautions to stamp out and prevent spreading

B.A.Brown

Chief Inspector of Stock

Sir,

Please note for the information of His Excellency the Governor that upon arrival at Fox Bay in the "Afterglow" I proceeded with Mr. Wilson to Dunnose Head where I examined all the flocks on that Station, as some of the ewes had been obtained from Port Howard two years ago, there were no signs of Lice.

I examined the sheep that were on the Chartres-Port Howard boundary and failed to find any signs of Lice.

From there I proceeded to Port Howard and dipped two flocks that were slightly infected, one flock of about 400 cast ewes that were badly infected was destroyed by Mr Evans as he did not wish to drive them over clean ground to the dip.

This was the only flock that showed severe infection since the dipping of last February and I consider Mr Evans most thorough in his endeavours to Stamp out this pest.
